

Everything that crawls the corpus, family by family

The consolidated record names the 170 automated agent families observed against ENTIA's 11,330,391 verified entities, including those that made a single request. This page reproduces all of them, with the same figures and in the same order, so that the scale of what is being extracted is visible in full and not only through the ten largest. Nothing is folded into an "others" row and nothing is omitted for being small.

2,279,997

third-party machine requests

of 2,353,964 raw; 73,967 of our own declared and excluded

170

agent families

36 grouped under 23 registered operators; 134 by name only

1,431,698

entity records served in full

1,158,743 distinct verified entities

149

families without network corroboration

88% of the names, 2.4% of the volume: recorded, not accused

How to read the table. "Requests" is everything the family asked for, directories and resources included; "Records served" are requests for a verified entity answered in full, and "Distinct entities" how many distinct entities it obtained at least once. The last two are never published under each other's name. "Network-corroborated" is the share of requests that came from a network whose label matches the operator; a family without corroboration declares a name that cannot be tied to any known network and is recorded as not corroborated, neither verified nor dropped. Registered operators are the 23 in ENTIA's operator file; the rest appear by name only, as in the record. The source is the signed record, section 6: any discrepancy between this page and the record is resolved in favour of the record.

Source and verification

The consolidated record, signed with a qualified electronic signature, can be downloaded at entia.systems/access-report/acta-consolidada.pdf ([/access-report/acta-consolidada.pdf](https://entia.systems/access-report/acta-consolidada.pdf)) and its signed container (.asice) validates at the European Commission's DSS validator with no involvement from ENTIA.
